Part 4: Displaying model evaluation on the Model Management dashboard..... 5

Overview

In this lab you will learn how to configure model evaluation in DSX.

Required software, access, and files

- To complete this lab, you will need access to a DSX Local cluster.
- You will also need to download and unzip this GitHub repository:
https://github.com/SidneyPhoon/DSX_Local_Workshop

Part 1: Load the sample project and create model

1. If you haven't already created a project from *DSX_Local_Workshop.zip* file, follow instructions for *Use Case 1* in this repository
https://github.com/SidneyPhoon/DSX_Local_Workshop
2. If you haven't run through the *TelcoChurn* notebook, run through it so that you generate a model and save the "Evaluation data set". The easiest way to do this is to open the notebook, scroll down to **Step 10**, click on it, then in the menu select **Cell -> Run all above**.

```
from dsx_ml.ml import save

model_name = "Telco_Churn_ML_model"
save(name = model_name,
     model = model,
     algorithm_type = 'Classification',
     test_data = test)

Using TensorFlow backend.
/opt/conda/lib/python2.7/site-packages/sklearn/cross_validation.py:41: De
which all the refactored classes and functions are moved. Also note that
0.20.
"This module will be removed in 0.20.", DeprecationWarning)

'Model successfully saved to path /user-home/1003/DSX_Projects/DSX_Local_

# Write the test data to a .csv so that we can later use it for Evaluation
writeCSV=test.toPandas()
writeCSV.to_csv('../datasets/TelcoModelEval.csv', sep=',', index=False)
```

Navigate to the **Assets** view and make sure that the model has been created. Your model may have a different name and version.

Note: In our example the "Evaluation data set" is subset of data used for modeling. We chose this approach for convenience and demonstration. In a production environment the "Evaluation data set" is the new set of historical data that's used to verify that the model is still accurate. This data set can be

automatically uploaded to the data source that's used for evaluation either by a script in DSX or an external process.

Part 2: Test evaluation batch script

1. Click on the ellipses next to the model and select **Evaluate**.
2. Select the data source for evaluation (*TelcoModelEval.csv* file which we generated in a notebook)

When we ran evaluation in the notebook we used *BinaryClassificationEvaluator* and *Area Under Roc Curve* as the metric. We suggest that you use the same values when creating the evaluation script.

```
from pyspark.ml.evaluation import BinaryClassificationEvaluator

# Evaluate model
evaluator = BinaryClassificationEvaluator(rawPredictionCol="prediction", labelCol="label", metricName="areaUnderROC")
print 'Area under ROC curve = {:.2f}'.format(evaluator.evaluate(results))

Area under ROC curve = 0.92.
```

Keep the default *Threshold* values.

Schedule evaluation script inputs

Input data set *

TelcoModelEval.csv

Evaluator *

Binary

Threshold Metric *

Area under ROC Curve

Threshold *

0
1

Min: 0.30
Mid: 0.70

3. Click on **Advanced Settings** and change the *name* of the script. For example, you can name it *TelcoChurnEvalScript*. Select *.ipynb* extension. Click **Save**.

Advanced settings

File name *

TelcoChurnEvalScript

File extension *

.ipynb

4. Click **Generate Evaluation Script**.

- Click **Run now**.
- Scroll down to review the results and wait till the run has finished.

Runs run now

ID	NAME	TRIGGERED BY	STARTED AT	DURATION (S)	RESULT
1516133660-999	Run 1	admin	16 Jan 2018, 2:14 PM	33	Success

- If you go back to Project details and click on the model, you can scroll down to the evaluation section and view the results of the run.

Evaluation results

START TIME	ACCURACYScore	AREAUNDERPR	AREAUNDERROC	THRESHOLD
16 Jan 2018, 2:14 PM	0.92	0.97	0.97	NaN

So far, we have generated the evaluation batch job script and made sure that it works by running it interactively. Now we can schedule an evaluation batch job.

Part 3: Schedule an evaluation batch job

1. In the Project view click on **Jobs**. Click **create job**.
2. On the Create Job screen provide Job name and make sure to select the right Worker (Python 2.x or 3.x) environment (check comments in the notebook or check with the instructor). Select job type *Model Evaluation* and the evaluation script that we crated in one of the previous steps. Scroll down and select either "on demand" or a specific time. Click **Create**.

DSX_Local_Workshop_el > Jobs > Create Job

Create Job

Name *

TelcoChurnEval

36

Description

Job description

300

Worker *

Jupyter, Python 2.7, Scala 2.11, R 3.4.1

Type *

Model evaluation

Source asset *

/scripts/TelcoChurnEvalScript.py

3. In the Batch Job Details view scroll down and select **Run Now**.

4. Provide *Run name* and click **Run**. After the job is done, you can navigate back to the **Model Details** page to make sure that the scheduled job ran.

Evaluation results						
START TIME	ACCURACY	AREA UNDER PR	AREA UNDER ROC	MIN THRESHOLD	MID THRESHOLD	PERFORMANCE
18 Jan 2018, 4:23 PM	0.92	0.97	0.97	0.3	0.7	Good
18 Jan 2018, 4:23 PM	0.92	0.97	0.97	0.3	0.7	Good
18 Jan 2018, 4:23 PM	0.92	0.97	0.97	0.3	0.7	Good

Part 4: Displaying model evaluation on the Model Management dashboard

In order for the model evaluation job to show up in the Model Management dashboard, the model needs to be published.

1. In Project details view, navigate to Models. Select **Publish** next to the model. Provide *Published name*. You can publish to the same project (*DSX_Local_Workshop*).

Publish Model

Model name

Telco_Churn_ML_model/1

Published name *

TelcoChurnSparkML

Description

Published model visibility

Restricted to collaborators in the selected project

DSX_Local_Workshop_el

▼

2. Publish *TelcoChurnEval.csv* file to the same project.
3. In the Project view click on the **Published Assets** tab.

Projects > DSX_Local_Workshop_el > Published Assets		
All	Notebooks	RStudio
Models	SPSS Modeler Streams	Scripts
Data Sets	Other Files	Published Assets
Published Assets		
NAME	TYPE	DATE PUBLISHED
TelcoChurnEval	CSV	1-22-2018
TelcoChurnEval	MODEL	1-22-2018
TelcoChurnML	MODEL	1-18-2018
TelcoChurnSparkML	MODEL	1-18-2018

- Click on the model and in the Model Details view, scroll down and click on **Deploy**.

Published Models > Create deployment

Create deployment

Model Name
TelcoChurnML

Name *
TelcoChurnML_Online

Type *
Online

Engine
Python 2.7

- In Model Deployment view, scroll down and click **Schedule Evaluation**

- Select the same values as we did in the unpublished model evaluation.

Schedule evaluation script inputs

Input data set *
TelcoModelEval.csv

Evaluator *
Binary

Threshold Metric *
Area under ROC Curve

Threshold *
0 1
Min: 0.30 Mid: 0.70

- Click on **Advanced Settings** and change the name of the script. Select *.ipynb* file extension. Click **Save, Generate Evaluation Script**, and **Run now**.

Advanced settings

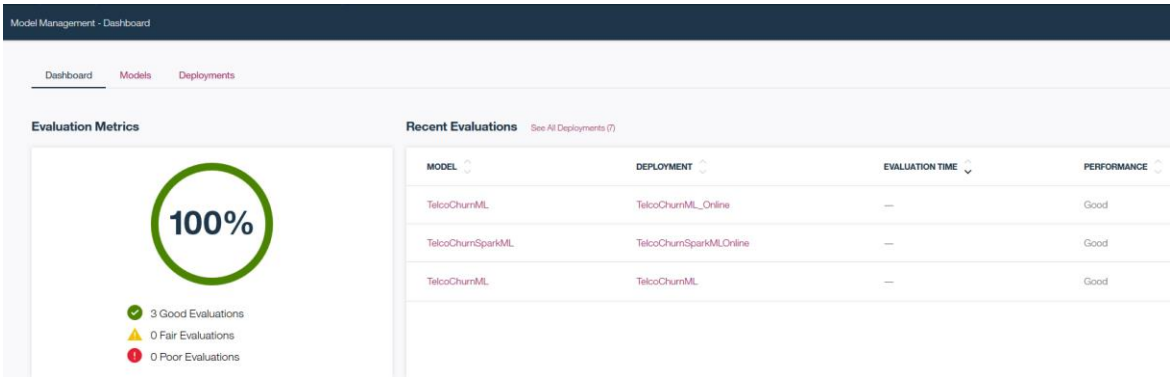

File name *
TelcoChurnEval_Published

File extension *
.ipynb

- Wait till the script is done running.

Runs					
ID	NAME	TRIGGERED BY	STARTED AT	DURATION (S)	RESULT
1516654723-1003	Run 1	Elena Lowery	22 Jan 2018, 2:58 PM	38	Success

9. Now when you navigate to the **Model Management** dashboard, it shows model evaluation results.

10.If you wish, you can schedule a job for evaluation of the published model. Schedule the job using the Jobs view in the project (use the script that was generated for the published model).

You have finished working on Model Evaluation in DSX lab.
